

Master Your OSCEs: Precision Management for Critical Clinical Skills Assessment *SimBoost: Streamlined Management, Objective Assessment & Secure Data*

Elevate Your Clinical Competency Assessments Stop struggling with manual workflows, costly hardware, and data security concerns. SimBoost delivers a comprehensive, software-driven platform designed to streamline your Objective Structured Clinical Examinations (OSCEs). Eliminate operational friction, enhance learner feedback, and safeguard sensitive data with a system that puts control back in your hands.

Key Platform Capabilities

- **Precision Workflow Automation:** Effortlessly pull participant lists, apply flexible scheduling rules, and automatically manage your OSCE circuit. Synchronized countdown timers, automated PA announcements, and Smart Signage monitors ensure seamless station rotation.
- **Instant Electronic Scoring:** Go paperless. Instructors complete customizable digital checklists on any tablet or mobile device. Scores and video annotations sync instantly to the central server, providing immediate feedback and flexible reporting.
- **Uncompromising Exam Integrity:** A dedicated "Exam Mode" restricts student access to recordings and results until officially published by administrators, protecting the confidentiality of high-stakes evaluations.
- **Advanced, Synchronized Debriefing:** Operators can instantly tag critical moments during live sessions using hotkeys. During debriefing, the system synchronizes multiple camera angles, patient monitor vital signs, audio, and the completed checklists into a single, unified review screen.
- **Versatile Scenario Management:** Test anything. Build diverse stations incorporating "ePatients," digital ECGs, and images. Centrally manage your simulated actors pool and distribute specific scripts and reading materials automatically.
- **Powerful Analytics:** Export raw assessment data to tools like Excel or Microsoft BI for advanced statistical processing, inter-rater reliability analysis, and identifying student-faculty perception gaps.

The SimBoost Difference

- **Perpetual Licensing:** Invest once and own your software. Avoid recurring subscription fees and enjoy predictable budgeting for your simulation center.
- **Hardware Agnostic Freedom:** Say goodbye to expensive proprietary hardware lock-ins. SimBoost integrates seamlessly with standard, off-the-shelf webcams, IP cameras, microphones, and PCs.
- **Absolute Data Security (On-Premises):** Your data, your control. All sensitive video and assessment data is stored securely on your institution's local servers, ensuring strict adherence to HIPAA and internal IT compliance.
- **Simulator Agnostic & Scalable:** Capture monitor feeds from virtually any physical simulator (Laerdal, CAE, Gaumard, etc.) and easily add new rooms to your central server as your simulation center grows.
- **AI-Powered Insights (Beta):** Future-proof your debriefing process with our "AI Instructor" feature, offering automated insights to enhance feedback quality.

Ready to Transform Your OSCE Program? Discover how SimBoost can elevate your clinical skills assessment with superior efficiency, security, and educational impact.
